

## **Data Protection**

### Videotranscript

#### **Thanks and goodbye**

[Beat Rudin]: Congratulations, you have reached the end of the course!

[Danielle Kaufmann]: In the first chapter, you learned why data protection is important and in which fields it plays a role. We focused in particular on the legal sources as the basis of data protection.

[Beat Rudin]: In the second chapter we looked at the practical side of data protection, that is to say data processing, especially by public bodies. You learned about the principles underlying data processing and what needs to be considered when processing data. We also discussed the significance of consent. Finally, you learned about how you can ensure data protection if third parties are processing the data on your behalf – and what that means for cloud services.

[Danielle Kaufmann]: In the third chapter we focused on disclosure of personal data. We discussed the principles, restrictions and procedures for disclosure and talked about cross-border disclosures of personal data.

[Beat Rudin]: In chapter four we looked into the rights of data subjects. We talked about the individual's right to information about and access to their own data, about other rights of data subjects, and about regulatory complaints.

[Danielle Kaufmann]: Thank you so much for taking our course; we hope we've been able to give you an understanding of the topic of data protection for your own day-to-day work.
